SUMMARY

Software Engineer skilled in full-stack development, REST APIs, authentication, and databases. Experienced with React.js, Express.js, MongoDB, MySQL, and application deployment. Strong in DSA with a focus on building scalable and practical software solutions.

PROJECTS

Farmer World Wellbeing Web (FW3) | [GitHub](#)

- Farmers in rural areas often struggle to access timely government assistance schemes, emergency support during disasters, soil testing services, and effective coordination at the village committee level, leading to delayed help and poor information flow.
- Designed and developed a full-stack platform featuring soil testing appointment booking, real-time disaster alert broadcasting, village committee management, and government assistance scheme tracking, powered by well-structured **RESTful APIs** and **MongoDB** schemas for efficient data handling.
- Built a modular **Express.js** backend with role-based access for farmers and administrators, and a responsive **React.js** frontend for seamless booking, alerts, and record management across devices.
- Automated critical communication using **Nodemailer** email notifications and **Twilio SMS alerts**, significantly reducing response time and enabling faster, more reliable coordination between farmers and local authorities during emergencies.

CampusConnect

- Students often lack a single, reliable platform to access departmental notes, faculty information, previous-year question papers, and placement-related resources, forcing them to rely on scattered WhatsApp groups and outdated notice boards.
- Developed a full-stack departmental resource management system supporting full **CRUD operations**, well-designed **MongoDB** schemas, a robust **Express.js** backend, and secure **JWT authentication** for role-based access, with reusable **React.js** components for uploading, browsing, and filtering resources by subject and semester.
- Centralized academic and departmental resources into one easily searchable platform, significantly reducing the time students spend locating study materials, faculty details, and placement information.

NewsCom | *React.js, News API*

- Users need a simple, unified way to browse current news across multiple categories such as sports, technology, and business without jumping between several different news websites and apps.
- Built a fully responsive **React.js** application that integrates the **News API** to fetch live articles, with category-based filtering, keyword search, dynamic content fetching, and clean, reusable UI components for displaying headlines and summaries.
- Delivered a consistent, mobile-friendly news browsing experience with fast category switching and reliable content updates, improving accessibility to real-time information for end users.

EDUCATION

B.Tech

2026

SGGSIE&T

SKILLS

Languages: C, C++, JavaScript **Frameworks:** React.js, Express.js **Databases:** MySQL, MongoDB

Tools: Git, GitHub, Postman, Vercel, Render **Concepts:** DSA, OOP, REST APIs, JWT Authentication

ACHIEVEMENTS AND CERTIFICATIONS

Solved **DSA problems on LeetCode** and actively practiced data structures and algorithms. [LeetCode Profile](#)

Participated in **HackFusion Hackathon** organized by SWAG & GDG, SGGSIE&T, contributing to the **React.js frontend** under strict deadlines.

Contributed to the **RNXG Robotics Club**, gaining experience in project planning, teamwork, and collaborative development.
