SUMMARY

Software Engineer skilled in full-stack development, REST APIs, authentication, and databases. Experienced with React.js, Express.js, MongoDB, MySQL, and application deployment. Strong in DSA with a focus on building scalable, practical, and user-focused software solutions.

EXPERIENCE

Software Developer Trainee

Nov 2025 – Apr 2026

TPG – Fitness-based Startup

Nanded, Maharashtra

- Completed a **6-month MERN stack internship** with a primary focus on frontend development and responsive user interface implementation.
- Worked under a **Senior Frontend Developer**, strengthening core **JavaScript** concepts and applying them to real-world application development.
- Developed and integrated reusable **React.js** components to build responsive and user-friendly interfaces across different screen sizes.
- Gained hands-on experience with **MongoDB**, **Express.js**, **Node.js**, **React.js**, **JavaScript**, and modern web development practices.

PROJECTS

Farmer World Wellbeing Web (FW3) | [GitHub](#)

- Farmers in rural areas often struggle to access timely government assistance schemes, emergency support during disasters, soil testing services, and effective coordination at the village committee level, leading to delayed help and poor information flow.
- Designed and developed a full-stack platform featuring soil testing appointment booking, real-time disaster alert broadcasting, village committee management, and government assistance scheme tracking using **RESTful APIs**, **MongoDB**, and structured database schemas.
- Built a modular **Express.js** backend with role-based access for farmers and administrators, along with a responsive **React.js** frontend for seamless booking, alerts, and record management across devices.
- Automated critical communication using **Nodemailer** email notifications and **Twilio SMS alerts**, reducing response time and enabling faster, more reliable coordination between farmers and local authorities during emergencies.

CampusConnect

- Students often lack a single, reliable platform to access departmental notes, faculty information, previous-year question papers, and placement-related resources, forcing them to rely on scattered WhatsApp groups and outdated notice boards.
- Developed a full-stack departmental resource management system supporting full **CRUD operations**, well-designed **MongoDB** schemas, a robust **Express.js** backend, and secure **JWT authentication** for role-based access.
- Built reusable **React.js** components for uploading, browsing, and filtering resources by subject and semester, creating a centralized and easily searchable academic resource platform.
- Centralized academic and departmental resources into one platform, significantly reducing the time students spend locating study materials, faculty details, and placement information.

EDUCATION

B.Tech – SGGSIET

2026

SKILLS

Languages: C, C++, JavaScript **Frameworks:** React.js, Express.js **Databases:** MySQL, MongoDB
Tools: Git, GitHub, Postman, Vercel, Render **Concepts:** DSA, OOP, REST APIs, JWT Authentication

ACHIEVEMENTS AND CERTIFICATIONS

Solved **DSA problems on LeetCode** and actively practiced data structures and algorithms. [LeetCode Profile](#)

Participated in **HackFusion Hackathon** organized by SWAG & GDG, SGGSIET, contributing to the **React.js frontend** under strict deadlines.

Contributed to the **RNXG Robotics Club**, gaining experience in project planning, teamwork, and collaborative development.
